# **Systems for Complete Treatment of your Water, Stormwater, & Wastewater**

We also offer turnkey systems designed specifically for your application with the scope of supply that fits your project

Physical & chemical treatment systems for removal of metals, reduction of BOD & COD, TSS, TDS.

Biological treatment systems for reduction of BOD, COD, Ammonia, Oil & Grease, Nutrients, etc.  
Full re-use systems are always an option.

Leachate treatment systems for pretreatment or full treatment for ground or surface water discharge.

Treatment/ Pretreatment of Stormwater for specific issues like odor, TSS, & oil as well as complete treatment & re-use

## **The Theia Difference**

Most companies offer you products which they try to fit into your application. Theia works with you as part of your team to select the best solution for you and your application. Some applications fit neatly into a standard product while others require a combination of products or something new altogether. Theia will provide the BEST solution for the application, the project, and for your plant.

Theia works as part of your team but we never forget that it is your project and your site and that you, the customer, always decides that the ultimate solution looks like. You also decide what scope of supply you require from us.

Most of our equipment and systems are available for lease and lease/purchase arrangements. Theia typically has equipment available for short term rental and can provide these on a fast mobilization basis.

We offer pilot scale systems for most of our technologies to let you kick the tires before making a decision.
