

Simplicity and Sustainability thru Innovation

Theia provides turnkey carbon and media equipment, service and systems. In the northeastern US, we provide vacuum and rebed services for any sized treatment equipment. For larger sites, we bring in a channel partner to assist us, allowing Theia to offer comprehensive service on activated carbon as well as organoclay, IX resins and sand and other filtration media replacement.

- ♦ Vacuum removal of spent media and replacement with fresh media
- ♦ Disposal of spent media
- ♦ Wide selection of activated carbon as well as other media

We have the best service equipment in the region and the most responsive service team. Not only are our technicians OSHA and Hazwopper trained to meet all your site criteria, they undergo a rigorous internal training program to make them experts on the equipment they are servicing.

Our team comes to the site and leaves it in better condition than when we came. This service can mean something as simple as cleaning up the area when we are done to repairing the system to get it back up and running properly. If we find a problem when we arrive, we do not walk away and let it be “someone else’s problem”, we roll up our sleeves and work with your site personnel to fix the problem and get your system up and running

In addition to the best carbon service in the region, we provide full repair services for carbon equipment, regardless where you bought it. If the vessel cannot be repaired, we will offer a rental unit until you can replace it, or provide a long term replacement. We also offer repair and rebuilds on treatment systems of all kinds, including Biogas systems, odor control systems or pollution control systems.

Give us a try and you will never go back to anyone else.
